X640

A close-up, high-magnification photograph of several small, translucent, cup-shaped fungi (Mycetes) growing on a reddish-brown, granular soil surface. The fungi have thin, dark stems and are scattered across the frame. The soil is composed of fine particles and small clumps of organic matter.

X640

1 cm

The image shows a close-up of a fungal specimen. On the left, there is a brown, textured, and somewhat irregular mass, possibly a piece of wood or bark. From this mass, a dense, white, filamentous growth extends towards the right. The filaments are thin and numerous, creating a cloud-like appearance. The background is dark and out of focus. A scale bar at the bottom center indicates a length of 1 cm. The magnification is noted as X640 in the bottom left corner.
