11602

A microscopic image of a mite, likely a Mesostigmata, showing its body and legs. The mite is centrally located and appears as a dark, somewhat oval-shaped organism with several pairs of legs extending from its body. The background is a light, textured surface, possibly a slide or a piece of paper, with some faint lines and small dark spots.

11611

A microscopic image of a hexapod collembola, a small soil-dwelling insect. The organism is translucent and has six legs. It is covered in numerous small, clear bubbles, which are likely secretions or air bubbles. The background is a light, slightly textured surface, possibly a slide or a piece of paper, with some small brown spots and a faint pencil mark.

X626

A microscopic image showing a dense population of small, translucent, hexapodan collimbolans in a pond. The organisms are mostly clustered on the left side of the frame, with several individuals scattered on the right. The water is a murky, brownish-yellow color. The organisms have a segmented, worm-like appearance with six pairs of legs. The image is labeled with 'X626' in the bottom left corner.
